

How this system works — start here

Written 2026-08-06 by reading the code, not the older docs. Where this disagrees with docs/system_map.md or the brochure, trust this.

Four documents, in reading order:

01_ARCHITECTURE.md	The map. What each package does, what runs when, where the two books live.
02_CONFIGURATION.md	Every knob that matters and where it lives. The gates that stop live trading.
03_AGENT_INPUTS.md	Exactly what each agent is fed, what it returns, and who reads the answer.
04_PRODUCTION_READINESS.md	The audit: what is solid, what is not, and what would have to be true before live.

The one-paragraph version

A scheduler (runner/) wakes up on cron. Twice a week it convenes a committee of eight LLM personas who each read a slice of a shared context blob and return a stance plus a falsifiable prediction; a challenger attacks the two loudest, a manager synthesises a posture. Every prediction is stored and graded against real prices weeks later, which produces a per-agent skill score. Separately, once a week, a PM agent reads those debates and allocates a simulated \$1M book. A historian distils lessons weekly. None of this touches the broker.

In parallel and completely independently, a mechanical momentum strategy trades a paper IBKR account through a hard-blocking risk manager. The agents do not place its orders and cannot.

The thing most likely to confuse you

There are two portfolios and they have nothing to do with each other.

	Traded book	Agent PM book
Who decides	strategies/top_k_momentum — mechanical	An LLM, weekly
Money	Paper IBKR account, CHF	Simulated, USD, state/agent_pm/
Path to orders	risk manager → broker	none — it cannot trade
Currently holds	AMD, CIEN, DELL, INTC, LITE, SNDK, STX, WDC	JPM, V, GLD, PM, HUM, LMT, XLV, NVDA

The committee debates the traded book. The PM allocates its own book. On 2026-08-05 the PM read its neighbour's positions as its own and announced it had exited a semiconductor cluster it never held — see OPERATOR_ACCOUNT_KEYS in agents/pm.py. If you are ever unsure which book a number refers to, that is the correct instinct.
